Macroeconomic and Markets Review

Global Economy Key Highlights:

The Global Economy churned out healthy growth in the second quarter, with advanced economies benefiting from lenient monetary conditions and tightening labor markets

- Inflation accelerated in the U.S. as hurricane-related disruptions caused gas prices to spike while UK Inflation came in above market expectations
- UK annual GDP growth revised down in Q2 to lowest rate since 2013
- China business activity hampered by tighter credit.

Domestic Economy Key Highlights:

- Consumer Price Index (CPI) which measures inflation increased by 16.01 percent (year-on-year) in August 2017. This was 0.04 percent points lower than the rate recorded in July (16.05) percent making it the seventh consecutive decline in the rate of headline year on year inflation since January 2017. Increases were recorded in all divisions that yield the headline index. The highest increases were recorded in clothing materials and articles of clothing, garments, passenger transport by air, motorcycles, shoes and other footwear, furniture and furnishing, books and stationary, non-durable household goods, pharmaceutical products and maintenance, repair of personal transport equipment and glassware, tableware & household utensils.
- After five consecutive quarters of contraction in the Real Gross Domestic Product (GDP), the Nigerian economy exited the first recession in over two decades. The Q2, 2017 figures that the National Bureau of Statistics (NBS) released on Tuesday, September 05, 2017 shows that the GDP recorded a growth rate of 0.55%. The growth in the GDP was mainly due to the growth recorded in Agriculture, Financial and Insurance, Electricity, Gas, Steam and Air Conditioning Supply, and Mining and Quarrying sectors of the Nigerian economy.
- The federal government's reaction to the news of Nigeria's emergence from the economic recession was subdued, as the government admitted that the country's economic growth remained fragile and vulnerable, despite the cheering news from the National Bureau of Statistics (NBS) that the economy grew by 0.55 per cent in the second quarter of 2017, after five consecutive quarters of contraction

Stock Market:

- The bearish outlook of the equities market softens in September on gloomy investors' sentiments.
- The NSE All Share Index dropped 0.18% compared to a loss of 0.96% in August while the Year to date performance closed at 31.87% from 32.11% in August.
- The market capitalization also lost about N20bn in the month under review.
- Market activity by volume closed downbeat (-43.63%) while value of trades dropped 67.17% in a lower deals relative to previous month's levels.
- We expect NSEASI outing in October to be quite bullish compared to last month bumpy outlook as investors anticipate Q3 result. We also expect some actions by the Govt in governance and fiscal frontlines to impact the equities market.
